EPD Percentiles for JOHNSTON KING 923W
Based on Fall 2011 EPDs Black Angus

50th Percentile is the Breed Avg. EPDs for 2010 Born Calves

923W was the high selling King son at the Johnston Fertile Valley sale in 2010. This bull has great balance and may have the best feet and leg structure of any Angus bull we have ever used. In fact balance is a great description of the bull. King is extremely easy calving and very easy fleshing. These are two very important traits to us as we have used him on upwards of 60 heifers and young cows a year for the last 2 years in our replacement female generation program. His calves are very vigorous and “get up and grow”. His daughters should perform well in our “hands off” management program. He is extremely quiet tempered, deep right through and has natural thickness and capacity.

We have been very impressed so far and have a large and consistent group of females on the ground. The only reason this sire is for sale is simply that we will be retaining so many daughters into our young cowherd.

923W is sire verified and has DNA on file with Genserve Laboratories.

Johnston King 923W (#1532669)
